

Job Title: Senior Security DevOps Engineer

FLSA Status: Exempt

SUMMARY

Runbeck Election Services is seeking a Senior Security/DevOps Engineer who enjoys building products that solve big problems, delight customers and get things done on a collaborative team. (Lone Rangers need not apply.) We believe small agile teams who develop, implement and ship software move the fastest and make the most impact. In this hands-on and technical role, the focus is to build and train others on Security and DevOps way of working. This includes enabling teams not only on processes and culture, but also on automation using tools like Docker, Kubernetes, Rancher, Twistlock and other cloud-native technologies.

The Senior Security DevOps Engineer objectives include: driving cultural change, encouraging collaboration between Dev, Sec and Ops Automate IT processes, standardizing DevOps tool chain, collecting metrics across Dev, Sec and Ops, supporting DevOps projects and integrating toolsets to best support DevOps and continuous deployment. The Senior Security DevOps Engineer must have a rich and diverse technical background and is creative and passionate about automation/DevOps and eager to learn emerging technologies and trends. As a Runbeck team member, the candidate continuously works to implement development solutions that evolve the Democratic process in the United States.

Responsibilities

- Lead the development of Security and DevOps culture, process, pipeline and platform behaviors and implement Continuous Integration, Continuous Delivery and automation efforts
- Look for improvement opportunities for long-term DevOps practices and lead change to remove impediments (political, financial, mental, social)
- Lead and participate in DevOps driven team projects and continuously improve DevOps processes and procedures for best practices
- Evaluate build and deployment procedures to optimize, streamline and automate
- Create and maintain DevOps technical documentation
- Create custom reports to show automation usage and savings
- Provide mentoring and guidance to less experienced DevOps Engineers
- Drive cultural change and encourage collaboration between Dev, Security and Ops
- Compose and communicate technical information to non-technical personnel

Skills and Requirements

- Modern development languages (C#, JavaScript, Go, Python)
- Communication Tools (MS DevOps, Confluence or similar tools)
- Scripting languages (Bash, Shell, Ansible or similar tools)
- Source Control Management Systems (all major GIT variations)
