

VOCEM™ PETITION MANAGEMENT SOFTWARE

Expedite Petition Processing —
Save Time and Resources

One of the more tedious, time-consuming and costly tasks that election officials must perform is the processing of petitions. The manual processes of counting pages to the verification of names and signatures must be completed within a strict timeframe. It often requires the additional cost of hiring inexperienced temporary staffing.

Solution: Vocem Petition Management Software for page, signature and address recognition. Vocem streamlines the petition process by providing automated counting and verification while providing full audibility. The easy-to-use software integrates with the Voter Registration (VR) database and uploads petition information into the VR database. Vocem produces full audit trails and expedited reports, so time saved is now directed to focus on elections.
